Roadmap

## HEXIDO Intro

HEXIDO represents a decentralized, scalable exchange platform where centralized exchange trading platform features are supported. HEXIDO will support swaps, orderbook, derivatives and margin trading. Its own engine will power the launchpad where the projects will do their initial launch to public, and tokens will be listed on HEXIDO right after.

HEXIDO names itself as a **Hybrid Exchange Platform, HEX!**

## Features

### Trading

**HEXIDO** will support trading on Binance Smart Chain, Avalanche and Solana blockchains. Governance model will be used whether to expand to Ethereum, Cardano and other blockchains.

### Supported Trading Features

- Swaps
- Orderbook – On-chain, Off-chain
- Derivatives
- Margin Trading

### Liquidity Pools

You can swap tokens on HEXIDO that has enough liquidity. HEXIDO will ensure, each pair has enough liquidity hosted by our platform and it'll be supported by external liquidity providers to ensure it's easy, cheap and transactions go through.

Providing liquidity in LP Token form, will earn you rewards in the form of trading fees.

## Lottery

HEXIDO lottery gives you a chance to win rewards in the format of HEXIDO Token. You can purchase as many as tickets to increase your chances of winning.

### Rules:

- 1 Ticket Costs \$5 in HEXIDO Token
- A ticket will consist of six-digit combination, each being between 0 and 9. Numbers have to match in order from left to right to win prizes.
- Bulk purchase gives you a discount rate.

Ticket Count	Discount Percentage
10	0.10%
30	0.20%
50	0.30%
150	1.50%
500	5.00%

### Prize Pool Distribution:

If more than one ticket has matching numbers, prizes will be distributed equally to all winners. 20% of the price pool will be burned in HEXIDO Token format.

Match first 1	2%
Match first 2	3%
Match first 3	5%
Match first 4	10%
Match first 5	20%
Match first 6	40%
Burn	20%

## Launchpad

HEXIDO allows the launch of the tokens into multiple chains (Binance Smart Chain, Avalanche, Solana). It enables easy integration with HEXIDO and other exchange platforms.

HEXIDO mobile application and wallet will support Launchpad participation. Users will be able to participate in IDOs, claim their allocations and exchange these tokens on HEXIDO Exchange.

HEXIDO will help listing IDO tokens on centralized and decentralized exchanges which will ensure stronger market entry for the projects.

The platform will also serve as an incubation platform for the early-stage projects from the seed investment phase. Investors will have an opportunity to get these project's tokens in early stage in more competitive prices and projects will have an opportunity to get an

investment from individuals. There will be several partnerships with the VCs and angel investors.

HEXIDO Launchpad will have tier system where the users will lock their tokens for certain amount of time. Users will have to register their interest to the listed projects. Once registration is complete, each user will be able to monitor their allocation and the IDO will run for certain amount of time. If there are unsold tokens, “First Come First Serve” round will take place and users will be able to acquire additional tokens.

Mobile application will support Initial Dex Offerings on HEXIDO’s own wallet system.

## **Mobile App**

HEXIDO will consist of three major features on the mobile application.

- Major Wallet System

Wallet will support multi-chains on a single and basic interface. Users within the same interface will be able to track the same currency on different blockchains. For example, if the user is holding HEXIDO on Binance Smart Chain and Avalanche blockchains, they’ll be able to see two different allocations of these and chose which one to transfer to other wallets.

- Trading Platform

HEXIDO mobile application will support basic swaps, orderbook, derivatives and margin trading. Integrated HEXIDO wallet will easy the process by eliminating the need to sync any external wallet to the application such as Metamask.

- Launchpad Support

We often see that launchpad platforms are not or limited supported on mobile applications. User identification will happen on a decentralized wallet system where any web activity will be synced and recognized on the mobile application. Therefore, the IDO participations, allocations and token claims will be available on the mobile application in user friendly method.

## **Wallet**

HEXIDO will support web and mobile application wallet systems. On the web it’ll work as a webpage where the users will be able to login to wallet system to manage their assets and as a chrome extension to be used on HEXIDO or on the other supported exchanges.

Mobile application will have a simple interface to support asset storing, farming, trading and staking purposes. Application will have a simple interface and it’ll support the main blockchain ecosystems HEXIDO will support. These are; Binance Smart Chain, Avalanche and Solana

blockchains. If the community decides to expand to Ethereum, Cardano and other blockchains HEXIDO will improve the wallet to support these blockchains.

### **Seed Investment Platform**

Often new projects are struggling to find funding for their projects. VCs due diligence and the project selection processes are long, and it requires a lot of effort. HEXIDO will simplify the due diligence process and will have a partnership with some of the private investors and VCs to support the projects from the early stage of the development. HEXIDO will help them working on community growth and long-term project success.

Matured projects will be listed on the HEXIDO launchpad and will be listed right away on the exchange. HEXIDO Community Pool of Talents will help and have the opportunity to help the project growth and expansion. HEXIDO will also help the project to get listed on the centralized exchanges.

### **Tokenomics**

IDO	34%
Initial Development Budget	1%
Liquidity	17%
Ecosystem&Development	10%
Partnership&Marketing	7%
Team	12%
Advisors	4%
Staking Rewards	14%
Airdrop	1%

Total Supply: 500,000,000

IDO Price: \$0.030

Initial Marketcap: \$255,000

Planned buyback: 250,000,000

### **Governance**

Governance Model will be announced

### **Development and Bug Bounty**

HEXIDO will allocate funds to the development and bug bounty program.

## **Hiring**

Wherever possible HEXIDO wants to hire part time and full-time employees from the community. Community support, support agents, developers, business developers will be selected from the community.

## **Roadmap**

Detailed roadmap will be announced soon.
